Dear Madam,

Sub: Quotation for Indian Nutrition Software – “DietCal – A Tool for Dietary Assessment and Planning”

This as in response to your query regarding the Nutrition software – “DietCal – A Tool for Dietary Assessment and Planning”. The license for **each copy** of the afore mentioned software is available for Rs. 4000/- (Rupees Four Thousand Only) **plus 18% GST** and shall be provided after online payment to the following account.

Profound Tech Solutions
Union Bank of India
Current Account No – 510101000663408
IFSC Code- UBIN0805866
Lajpat Nagar Branch
New Delhi-110024

Please note that one licensed copy of the software can be made to run on one computer system only having Windows as operating System. One license is valid for a period of four years from the time of purchase, after which it can be renewed. This is also to bring to your kind notice that the developing and marketing of the above mentioned software is solely done by Profound Tech Solutions.

Sending you an Introduction and the User list of the software.

Tavinder Kaur.

CRITERION 4 (AQAR 2022-23)

Indian Nutrition Software – “DietCal – A Tool for Dietary Assessment and Planning”

Dietary calculations of various nutrients is an essential requirement of any Clinical and Research setup dealing in nutrition. In a hospital setup, most of the burden on a Dietician is on calculations involving various nutrients, be it planning individualized therapeutic diet or feed formula for an indoor patient or assessing nutritional status and planning follow up diets for outdoor patients, all of these require extensive nutrient calculations.

In a scientific research setup, nutrition based studies demand calculations of more than 40 nutrients for a minimum of three days of food intake for each subject (24 hr recall) or intake by food frequency method. In a community based nutrition research project involving a minimum of 500 subjects, these nutrient calculations can take time in months thus putting a huge burden on the Nutritionist. Also, the precision and the reliability of the data generated manually becomes questionable.

In this era of modernization and keeping with the fast pace of working, an Indian nutrient based software that will help to do all the above, will prove to be a boon and will reform the working modalities of professionals dealing in Nutrition. “**DietCal – A Tool for Dietary Assessment and Planning**” is an attempt towards this vision. This software has enabled all of the above at the click of a mouse with precision, thus enabling improvised patient care on one hand and promoting more nutrition based clinical and community researches on the other. It has been extensively used by Dieticians, Lecturers, Students, Phd scholars, Doctors and Research organizations like ILSI, PHFI, CCDC, N-DOC, SAI, INCLEN, TERI, DFI, IARI and so on, all over the Country.

The newer version of the DietCal software has been updated with the new Database from the book – Longvah T, Ananthan R, Bhaskarachary K, Venkaiah K. Indian Food Composition Tables. National Institute of Nutrition, Indian Council of Medical Research, 2017. (Commonly referred to as IFCT 2017) with due permission from the Director, NIN.

DietCal is a simple, user friendly software, easy to install and above all in a price that fits the pocket of a student also. It is a sincere effort and contribution of a Nutritionist to her Fraternity to help improve the nutritional status of their patients or subjects of their research. Some of the features of this software are :

The utilization of the software can be divided into two major categories. For Regular use-To help us in our day to day calculations and For Research use - to help us in research work.

In Regular Use Section

- **Planning Quick Diet charts** with accuracy you otherwise cannot achieve manually.
- **Nutrient Calculation** - You can get the values of all 177 nutrients for each food item added in the list of your diet chart and also their sum total.
- **Invisible Fat** - You can calculate the amount of invisible fat contributed by various food items before you prescribe the amount of visible fat.
- **Nutrient Adequacy over Phone**- Using this section, you can assess the nutrient adequacy of an Individual over the phone itself.
- **Planning Liquid formula for tube fed patients** - You can plan a liquid formula using a combination of kitchen based and commercially available products with their calculation of electrolytes in seconds.
- **Disease Specific Calculations**- If you wish to calculate the carbohydrate intake at each meal of a diabetic or distribution of soluble fibre in his diet OR you wish to calculate the branched chain amino acid content of a milk based vegetarian diet OR calcium intake by a menopausal woman OR phosphate content of an ICU feed formula or plan a low potassium, low phosphate diet for a renal patient OR assess calorie intake of your obese follow up OR assess the nutritional

CRITERION 4 (AQAR 2022-23)

adequacy of a weaning foods OR prepare a list of fruits with their potassium content in descending order and for many more such needs, this section provides the solution.

- **Percent Edible portion** - You need not have to remember the edible weight of a big banana or that of a walnut and of many more food items.
- **Add Recipes and know their Nutritive value** – There is a vast diversity in foods prepared in different regions of our country. Rasam prepared in Chennai is different from that prepared in Kerala. Not just they differs in taste but also in their ingredients and hence their nutritive value. In today's era of super specialization, before assessing the nutritional status of a patient, knowing his regional specific recipes is very important. Standardization of recipes is easy but not calculating its nutrient content per serving. **This software enables you to add unlimited recipes and get value of all 177 Nutrients at the click of a mouse. You can get nutrient values per serving of the recipe or in terms of various household measures.** You no longer have to hunt for calorie value of a Dosa or the protein content of a Paneer paratha . You can add recipes according to the community you are dealing with and know its nutritive value for all 177 nutrients. Using recipes specific to the region will help in augmenting the accuracy when you prescribe diets or assess intakes of your patients / subjects belonging to different parts of our country.
- **Recipes Added** – Commonly used north Indian recipes have been standardized and added with in depth details and photographs. Method of preparation, amount of each ingredient added including Spices , amount in each katori and many other details has been pictorially explained. The software will be regularly updated with various regional recipes.
- **Explain food items in various Regional Languages** - You can explain food items to your patients in their regional language. Also if an individual is explaining some food in his local language you can find its name in your own language. This helps in enhancing your counseling skills. Names of food items in 19 different Indian languages are added in the software.
- **Pictorial display of 431 food items and of all Recipes added** will further assist in better interaction with your patients / subjects. Against most food items you will find its photo as well as its name in 20 Indian languages. Also photos of various varieties of the same food, for e.g 21 varieties of brinjal have been collectively put to help you and your patient/ subject to choose easily.

In Research Use section

- **Multiple Research Projects** – You can store and analyze data of not just one but as many Research projects as you can handle.
- **No Limitation on Number of Subjects** – You can add any number of subjects in your project. Basic information of each subject with their codes & dates of interview can be added.
- **BMI Calculator** – The software calculates the BMI of your each subject.
- **Dietary Intake Methods** - Nutrition based research requires nutritional assessment of your subjects by various Intake methods - 24 hour recall (Three day or multiple days) or Diet record or Quantitative food frequency method. This section helps you to utilize all these methods efficiently. In food frequency method, you need not have to manually calculate the intake per day.
- **Flexibility in Data Entry** - You can quickly add any number of food intakes of a subject. Strategies to save time taken for entries, editing or deleting data have been incorporated.
- **Data Analysis of a Project at the click of a Mouse** - Conventionally, intakes of subjects were taken in a questionnaire. Each recipe from the dietary intake of the subject was converted into its raw food ingredients. Against each raw ingredient, all the nutrients required were calculated

CRITERION 4 (AQAR 2022-23)

individually and then their sum total taken. This total was then put into the excel sheet for 1st, 2nd and 3rd day recall and then the average calculated. Nutrient calculation for three day recall of a single subject never took less than two days even if it was for as many as 10 nutrients only. So, for a research project having 100 subjects or above, and aiming at more than 30 nutrients, the time required for analysis used to be in months.

“In DietCal, the values of all 177 nutrients for each day’s intake for all the subjects involved in the project can be calculated at a click of a mouse. The table thus generated can directly be taken for statistical analysis. Hence, the time saved is in months”.

- **Multiple Nutrient Analysis** – For any research project the nutrient analysis manually could never exceed more than 10 nutrients. This software helps to do multiple nutrient analysis from the same data thus facilitating more publications.
- **Analysis by Food Group** - Summary of amount of different food groups eaten by each subject of your project can also be generated.
- **Easy merging with other data** - You can easily merge nutrient data of the subjects with other data such as anthropometry or biochemical parameters.
- **Permanent Storage of Food intakes** - Conventionally, we always saved the Nutrient analysis of our subjects even after the completion of the project. Food intakes of each subject recorded in the questionnaire could not be stored for years. This software helps you to save all the intakes of each of your subject. This enables you to do multiple nutrient analysis even years after completion of your project.

General

- **Based on the Indian Nutritive values of foods** – The newer version of the DietCal software has been updated with the new Database from the book – Longvah T, Ananthan R, Bhaskarachary K, Venkaiah K. Indian Food Composition Tables. National Institute of Nutrition, Indian Council of Medical Research, 2017. (Commonly referred to as IFCT 2017).
- The data base of the earlier version of the software was that given by National Institute of Nutrition (NIN), Indian Council of Medical research. (“Nutritive Value of Indian Foods” by C. Gopalan, B.V.Rama Sastri and S.C.Balasubramanian. Revised & updated by B.S.Narasinga Rao , Y.G.Deosthale & K.C Pant, National Institute of Nutrition (NIN), Indian Council of Medical Research (ICMR), Hyderabad, India. Reprint 2012).
- **Add More Nutrients to the list**- In addition to 177 Nutrients already added in the software you can add as many Nutrients on your own.
- **Add more food items to the list** - In addition to 542 food items given by NIN, there is a provision to add as many foods as you wish. Please note that there is a source of information (IFCT, NIN 2017) provided against each nutrient of all 542 food items fed in the software. Similarly it is mandatory for you to put the source of information for each nutrient value added for a food item by you.
- **Scientific Names**- You can explore foods from different countries using the Scientific Names added in the software.
- **View All Nutritive value at Glance** - Values for all nutrients for a food item along with their source of information can be visualized at the click of a mouse which can help you to answer the nutrient related queries of your patients instantly. For e.g What is the phosphorous content of a handful of Walnuts?
- **Provision of Household Measures** - Data can also be stored in this software in various household measures pertaining to a specific region. Dietary intakes can thus be taken in terms

Anubha
Dr. Anuradha J. Bakshi
FC Principal

CRITERION 4 (AQAR 2022-23)

of weight of edible portion, sizes, bowl, spoon, or other household measures specific to that region.

- **User Guide** with detailed explanation of each section of the software is provided. Data credential document and various PPT's on "How to Install the software", "Using Sorting and filtering options in the software" are provided so that you can use this software without requiring any help.
- **Backups** - There is a quick provision to take Backups of your data so that in case of any mishap you can reinstall the software and restore your data .You can reinstall the software as many times but in the same computer.
- **Password** facility to secure your software is also provided.
- **Updates** - This software is regularly updated. The update of the software can be downloaded from www.dietcal.in. More information can be obtained by writing to info.dietcal@gmail.com.
